HoYoLab Cookie Setup Guide

For International Server Users — StarRail & Genshin Bot

Why Do I Need Cookies?

The bot needs your HoYoLab session cookies to query your account data (characters, stats, etc.) from HoYoverse's API. The international version of HoYoLab does not support QR code login, so you need to manually extract these cookies from your browser.

⚠️ ***Your cookies are like a temporary login token. Keep them private and never share them in public channels.***

What Cookies You Need

You need to find and copy these 4 cookie values:

Cookie Name	Description	Example Format
`ltoken_v2`	Login token (long string)	`v2_CABC123...`
`ltuid_v2`	Your account ID	`70985654`
`cookie_token_v2`	Cookie auth token	`v2_CAXYZ456...`
`account_id_v2`	Same as ltuid_v2	`70985654`

Step-by-Step Instructions

Step 1 — Log into HoYoLab

1. Open Google Chrome and go to https://www.hoyolab.com
2. Log in with your HoYoverse account if you are not already logged in.
3. Make sure you are fully logged in and can see your profile.

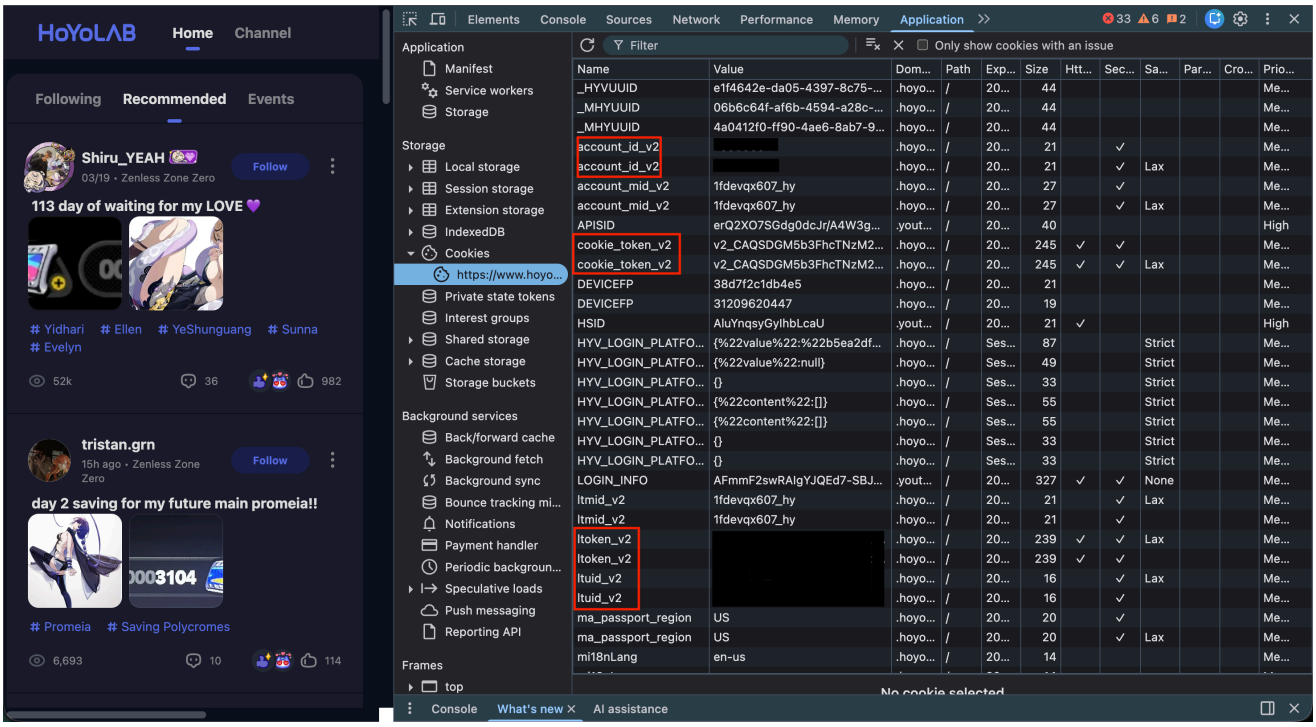
Step 2 — Open Developer Tools

4. Press F12 on your keyboard (or right-click anywhere on the page and select Inspect).
5. The DevTools panel will open on the right side or bottom of your browser.
6. Click the Application tab at the top of the DevTools panel.

⚠️ *If you don't see the Application tab, click the >> arrow at the top of DevTools to find it.*

Step 3 — Find the Cookies

7. In the left sidebar of the Application tab, expand the Cookies section.
8. You will see multiple domains listed. Click on .hoyolab.com.
9. A table of cookies will appear on the right side.
10. Find ltoken_v2 in the Name column and click on it.
11. At the bottom of the panel, you will see the full cookie value. Click on it and press Ctrl+A (or Cmd+A on Mac) to select all, then Ctrl+C (or Cmd+C) to copy.



⚠️ *The ltoken_v2 and cookie_token_v2 values are long strings starting with v2_CA... — make sure you copy the entire value.*

Step 4 — Copy All 4 Values

Repeat Step 3 for each of the following cookies. Paste each value into a text editor temporarily so you can assemble them:

12. ltoken_v2 — from .hoyolab.com
13. ltuid_v2 — from .hoyolab.com (this is just your numeric account ID)
14. cookie_token_v2 — from .hoyolab.com or .hoyoverse.com
15. account_id_v2 — same number as ltuid_v2

Paste them inside the webpage in the prompted area

Troubleshooting

Cookie not found / value shows NOT_FOUND

Try clicking through each domain in the Cookies sidebar (.hoyolab.com, .hoyoverse.com, www.hoyolab.com) until you find the cookie.

Cookie expires / stops working

HoYoLab cookies expire periodically. When commands stop working, repeat this process to get fresh cookies

Make sure you copied the full value without cutting it off. The ltoken_v2 and cookie_token_v2 values are very long — select all and copy carefully.
